

All-inclusive Orthodontic Management Software

OrthoMinds' cloud-based software provides a solution for any area in an Orthodontic practice where technology is needed or additive. One platform to solve all technology needs – from online patient forms to insurance verification and billing services.

On-line Patient Portal

OrthoMinds integrates true, on-line patient forms. As soon as a new patient's email address is populated, an automated message is sent to the patient prompting for their patient information to be entered. This information is transferred directly into the patient's chart within OrthoMinds. There is no intervention needed to transfer the patient information and no manual scanning of paper forms! The status of the patient's information is easily tracked by viewing the 'Patient Status Tiles' that will reflect green when the information is complete and will reflect red if information is missing.

Patient Dashboard

OrthoMinds is not only designed to help manage orthodontic practices, but it is designed to GROW practices. The unique, patient dashboard manages potential, income-earning opportunities within current and future appointments. Attention 'bubbles' indicate the number of patients or patient accounts that require follow-up. Actions, such as: recalls, no-shows, referrals or patients set for follow-up will never be lost again.

Digital Referral Tool

OrthoMinds digital referral tools allows referrals from Dentist or from Friends and Family to be populated

directly in the 'Referral' bucket in the patient dashboard. This feature allows the practice to contact and schedule the new referral immediately, without waiting for the patient to contact the practice.

Insurance and Billing Services

Allow more time for patient focus by allowing OrthoMinds to take care of your insurance and billing. OrthoMinds will verify patient insurance before new patient appointments, manage rejected claims and collect insurance payments. Additionally, OrthoMinds will collect patient payments on a monthly, recurring basis. OrthoMinds also takes care of the follow-up for both patient and insurance missed payments; collecting missed payments and completing the communication and documentation for 90 days. The production dollars are deposited on a recurring basis to the orthodontic office's bank with little, to no work from the staff.

So Much More...

OrthoMinds contains everything needed from an Orthodontic Practice Management Software including: state-of-the-art imaging and treatment cards, two-way texting, e-mailing, appointment confirmation, with all communication automatically documented in the patient chart. The OrthoMinds scheduler is intuitive – making scheduling easy and very timely.
